Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Li R, Xiong J; Arnaout AM,

WPI; 2002-188687/24.

Novel high affinity integrin polypeptide useful for treating restenosis and parasitic diseases, comprises all or part of variant integrin alpha subunit A domain or variant integrin beta subunit A-like domain.

Claim 53; Page; 55pp; English.

The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant

                    CD11b alpha subunit A domain, where I at residue 332 has been replaced by G or A, F at residue 312 has been replaced by G or A at residue 312 have been replaced by C, or for determining if a test compound is a candidate compound for binding to CD11b or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits are useful for reducing a skeletal muscle injury, for treating disorders caused by ischaemia-tro purify variant integrin polypeptide ligands and parastic diseases, to purify variant integrin polypeptide ligands and as bait proteins in two-hybrid or three-hybrid assays. This sequence represents a human integrin alpha subunit Alpha 10 variant A domain. Note: This variant sequence is not featured in the specification but has been derived from the wild-type protein shown in AAU76853

The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin beta subunit A-like domain. The polypeptide preferably the CD11b alpha subunit A domain, where I at residue 312 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or V at residue 313 and A at residue 320 have been replaced by C, or Or CD1b or for treating an inflammatory disorder, by contacting a test compound is a candidate compound for binding to CD1b or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits a useful for reducing skeletal muscle injury, for treating disorders caused by ischaemian repertusion injury, immune complexes, restenosis and parasitic diseases, to purify variant integrin polypeptide ligands and as bait proteins in two-hybrid or three-hybrid assays. This sequence represents the human integrin alpha subunit Alpha 10 A domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        142

```
The present sequence is that of the human integrin alpha 10 subunit A domain. This includes an invariant Ile residue. The invention features contain integrin alpha subunit polypeptides in which the invariant Ile is substituted by Gly, Ala or some other amino acid (e.g. Val) or is deleted. The polypeptide can include part or all of the A domain. Seplacing the invariant Ile creates a variant integrin polypeptide that is southern to a variant integrin polypeptide that the wild type form of the subunit. Variant integrin polypeptides of the invention are useful in assays for compounds that integrin polypeptides of the invention are useful in assays for compounds integrin polypeptides of the invention are useful in assays for compounds of an integrin ligand to integrin, and for identifying activation. Specific ligands. They are also useful for generating antibodies, e.g. conocinal antibodies, which bind to the high efficiency form of an integrin some such antibodies recognise an epitope that is either not present or not accessible on an integrin that is in a lower affinity conformation. The invention also provides methods of administering a variant integrin polypeptide, or an antibody that selectivity binds it, to identify a ligand which binds to an active integrin. Such assays are useful for diagnosing inflammation, e.g. occult inflammation (e.g. useful for diagnosing inflammation, e.g. occult inflammation (e.g. babcess or an active arteriosclerotic lesion). Variant integrin containt integrin polypeptide integrin expression or activity, such as variant integrin polypeptide.

Human, integrin alpha subunit, A domain, Alpha 11; integrin beta subunit, Alike domain; inflammatory disorder; skeletal muscle injury, restenosis; ischaemia-reperfusion injury; immune complex; parasitic disease; antiinflammatory; vasotropic; antiparasitic; vulnerary; gene therapy.

Human integrin alpha subunit Alpha 11 A domain.

(first entry)

21-MAY-2002

```
The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin alpha subunit A domain. The polypeptide, preferably the collib alpha subunit A domain, where I at residue 320 have been replaced by CC GO A, F at residue 313 and A at residue 320 have been replaced by CC GO A, F at residue 313 and A at residue 320 have been replaced by CC GO A at residue 315 and A at residue 320 have been replaced by CC CO V at residue 315 and A at residue 320 have been replaced by CC CO V at residue 315 and A at residue 320 have been replaced by CC CO V at residue 315 and A at residue 320 have been replaced by CC CO V at residue 315 and A at residue 320 have been replaced by CC CO V at reating an inflammatory discreter, by contacting a test compound with the polypeptide and determining if the test compound binds CC to the polypeptide and determining if the test compound binds selected muscle injury, for treating disorders caused by ischaemia.

CC reperfusion injury, immune complexes, restencis and parasitic diseases, to purify variant integrin polypeptide ligands and as bait proteins in CC two-hybrid our trace-hybrid assays. This sequence represents a human complexed integrin alpha subunit Alpha 11 variant A domain. Note: This variant sequence is not featured in the specification but has been derived from the wild-type protein shown in AAU76854
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel high affinity integrin polypeptide useful for treating restenosis and parasitic diseases, comprises all or part of variant integrin alpha subunit A domain or variant integrin beta subunit A-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CQTYMDIVIVLDGSNSIYPWVEVQHFLINILKKKYIGPGQIQVGVVQYGEDVVHEFHLND

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             윤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠ
                                                                                                                                                                                                                                                                                                      The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin better authority. The polypeptide, preferably the control alpha subunit A domain, where I at residue 312 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, is useful for determining if a test compound is a candidate compound for binding to CDIB or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits are useful for reducing skeletal muscle injury, for treating disorders caused by ischaemiar reperfusion injury, immune complexes, restenosis and parasitic diseases, to purify variant integrin polypeptide ligands and as bait proteins in two-hybrid or three-hybrid assays. This sequence represents the human thegrin alpha subunit Alpha 11 A domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 YRSVKDVVBAASHIEQRGGTETRTARGIEFARSEAFQK--GGRKGAKKVMIVITDGESHD 118

The present sequence is that of the human integrin alpha 11 subunit A domain. This includes an invariant Ile residue. The invention features covariant integrin alpha subunit polypeptides in which the invariant Ile is substituted by Gly, Ala or some other amino acid (e.g. Val) or is caleted. The polypeptide can include part or all of the A domain. Comparing the invariant Ile creates a variant integrin polypeptide that is solution has a greater proportion of ligand. Forming polypeptides than the wild-type form of the subunit. Variant integrin polypeptides of the invention are useful in assays for compounds that bind to a variant ligand, that interfere with or enhance the binding of an integrin ligand to integrin, and for identifying activation. Some such antibodies, which bind to the high efficiency form of an integrin. Some such antibodies recognise an epitope that is either not present or not accessible on an integrin that is in a lower affinity conformation. The invention also provides methods of administering a variant integrin polypeptide, or an antibody that selectivity binds it, to identify a ligand which binds to an active integrin. Such assays are useful for diagnosing inflammation, e.g. occult inflammation (e.g. to identify a ligand which binds to an active integrin integrin con active and an active and antibody the selectivity binds it, con abscess or an active and exteriosclerotic leasion. Variant integrin polypeptide ligand and to treat disorders associated with a cherrant or unwanted integrin expression or activity, such as variant and antibod and to treat disorders associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 CQTYMDIVIVLDGSNSIYPWVEVQHFLINILKKFYIGFGQIQVGVVQYGEDVVHEFHLND 60

                                                                                              Domain
```

```
domain. This includes an invariant limiter and the invention features variant integrin alpha subunit polypeptides in which the invariant Ile is substituted by Gly, Ala or some other amino acid (e.g. val) or is deleted. The polypeptide can include part or all of the A domain.

C deleted. The polypeptide can include part or all of the A domain.

C seplacing the invariant Ile creates a variant integrin polypeptide that its more active (i.e. in solution has a greater proportion of ligand-forming polypeptides of the invaniton are useful in assays for compounds that bind to a variant ligand, that inteffere with or enhance the binding of an integrin polypeptides of the invention are useful in assays for compounds that bind to a variant ligand, that inteffere with or enhance the binding of an integrin. Some such antibodies, which bind to the high efficiency form of an integrin. Some such antibodies recognise an epitope that is either not present or not accessible on an integrin that is in a lower affinity conformation. The invention also provides methods of administering a variant integrin polypeptide, or an antibody that selectivity binds it, to identify a ligand which binds to an active integrin. Such assays are useful for diagnosing inflammation, e.g. occult inflammation (e.g. abbress or an active antegrin. Such assays are abbress or an active antegrin integrin.
present sequence is that of the human integrin alpha subunit CD49a A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptides can also be used to affect the bioavailability of a variant integrin polypeptide ligand and to treat disorders associated with aberrant or unwanted integrin expression or activity, such as vascular

Rat alpha 1-I domain protein #1. 02-APR-2003 (first entry)

```
The present invention relates to novel antibodies that specifically bind to very late activation (VLA-1; betal containing integrins) antigens and methods of using these antibodies to treat immunological disporders. The antibodies are useful for preventing or treating VLA-1: canditions (e.g. psoriatis, oczema, burns, dermatitia and abnormal conditions (e.g. psoriatis, cezema, burns, dermatitia and abnormal proliferation of hair follicle cells), fibrosis (e.g. kidney or lung fibrosis), allergic rhinitis, respiratory distress syndrome, asthma, confitis, tendonitis, bursitis, fever, migrafune headches, gastrotine the achonitis, bursitis, fever, migrafune headches, gastrotine the achonitis, bursitis, fever, migrafune headches, gastrocintestrial irritable bowel syndrome, colitis and colorectal cancer), cascular diseases (e.g. atherosaclerosis), thyrodiditis, aplastic anaemia, contoimmune diseases (e.g. type I diabetes, myasthenia gravis, rheumatoid autoimmune diseases (e.g. type I diabetes, myasthenia gravis, rheumatoid arthritis, systemic lupus erythematosus and multiple sclerosis), renal fallure, sarcoidosis, nephrotic syndrome, Behcet's syndrome, gingivitis, olymositis, hypersensitivity (e.g. delayed type hypersensitivity or immediate hypersensitivity), graft and transplant rejections, graft confirmediate hypersensitivity, graft and transplant rejections, graft confirmatial ischaemia or endotoxin shock syndrome. The present sequence is the minantic or minantic or endotoxin shock syndrome. The present of the the confirmation of the the semplification of

```

```
The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin beta subunit A-like domain. The polypeptide, preferably the coll b alpha subunit A domain, where I at residue 312 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or C or determining if a test compound is a candidate compound for binding to coll b or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits are useful for reducing selectal muscle injury, immune complexes, restences caused by ischemianing two-hybrid or three-hybrid assays. This sequence represents a human two-hybrid or three-hybrid assays. This sequence represents a human contact in the contact in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                83 FRIKEEVVRAAKNLSRREGRETKTAQAIMVACTEGFSQSHGGRPEAARLLVVVTDGESHD 142

The present sequence is that of the human integrin alpha subunit CD49b A domain. This includes an invariant Ile residue. The invention features variant integrin alpha subunit polypeptides in which the invariant Ile is substituted by Gly, Ala or some other amino acid (e.g. Val) or is deleted. The polypeptide can include part or all of the A domain. Replacing the invariant Ile creates a variant integrin polypeptide that is solution has a greater proportion of Ilgand. Replacing polypeptides of the invention are useful in assays for compounds integrin polypeptides of the invention are useful in assays for compounds that bind to a variant ligand, that intefre with or enhance the binding of an integrin ligand to integrin, and for identifying activation. Specific Ilgands. They are also useful for generating antibodies, e.g. monoclonal antibodies which bind to the high efficiency form of an integrin shows matibodies recognise an epitope that is either not present or not accessible on an integrin that is in a lower affinity conformation. The invention also provides methods of administering a variant integrin polypeptide, or an antibody that selectivity binds it, to identify a ligand which binds to an active integrin. Such assays are useful for diagnosing inflammation, e.g. occult inflammation (e.g. abscess or an active integrin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptides can also be used to affect the bioavailability of a variant integrin polypeptide ligand and to treat disorders associated with aberrant or unwanted integrin expression or activity, such as vascular

Ligand binding through I domains requires an intact metal ion-dependent adhesion site (MIDAS) motif. A MIDAS motif has been identified in the extracellular domain of a newly identified human anthrax toxin receptor (ATR). The invention provides ATR polypeptides (see ABF4903-06) and polynucleotides (see ABV3881), vectors, host cells, and transgenic and knock-out animals. It also provides methods for identifying molecules claimed method for treating anthrax in a human or animal involves administering an agent that inhibits binding between PA and ATR at almolude ATR or reduce the severity of anthrax. Suitable agents include ATR or a PA-binding fragment of ATR, a PA-binding polypeptide at least 80% identical to these, a fusion protein, a monoclonal or polyclonal antibody, a polysaccharide, a lipid or a nucleic acid

The invention relates to a high affinity integrin polypeptide comprising all or part of a variant integrin alpha subunit A domain or a variant integrin beta subunit A-like domain. The polypeptide, preferably the CD11b alpha subunit A domain, where I at residue 332 has been replaced by G or A, F at residue 313 and A at residue 320 have been replaced by C, or V at residue 315 and A at residue 320 have been replaced by C, or Or A, T at the compound is a candidate compound for binding to CD11b or for treating an inflammatory disorder, by contacting a test compound with the polypeptide and determining if the test compound binds to the polypeptide. The integrin subunits are useful for reducing skeletal muscle injury, for treating disorders caused by isohaemia-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                    Human, integrin alpha subunit, A domain, CD49b; integrin beta subunit; A Like domain; inflammatory disorder; skeletal muscle injury; restenosis; sichaemia-reperfusion injury; immune complex; parasitic disease; Alpha 2; antiinflammatory; vasotropic; antiparasitic; vulnerary; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CPTYMDVVIVLDGSNSIYPWSEVQTFLRRLVGKLFIDPEQIQVGLVQYGESPVHEWSLGD 82
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          reperfusion injury, immune complexes, restenosis and parasitic diseases, to purify variant integrin polypeptide ligands and as bait proteins in two-hybrid or three-hybrid assays. This sequence represents the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel high affinity integrin polypeptide useful for treating restenosis and parasitic diseases, comprises all or part of variant integrin alpha subunit A domain or variant integrin beta subunit A-like domain.

Sequence 21325, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196-1136
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PELING DATE: 1998-02-18
PRIOR PELING DATE: 1998-02-18
PRIOR PELING DATE: 1998-02-18

Patent No. 6551795

GENERAL INCORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR SPLING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 29795

LENGTH: 177
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             67 LVQYGESPVHEWSLGDFRT------KEEVVRAAKNLSRRE------GRETKT 106

deoxynucleoside kinase complex I S-component - Lactobacillus acidophilus (fragment)
C/Species: Lactobacillus acidophilus
C/Species: Lactobacillus acidophilus
C/Date: 06-0ct-1994 #sequence_revision 18-Nov-1994 #text_change 09-Jul-2004
C/Accession: A54257
C/Accession: A54257
Biochemistry 33, 5328-5334, 1994
A/Title: Heterodimeric deoxynucleoside kinases of Lactobacillus acidophilus R-26: functi
A/Reference number: A54257
A/Accession: A54
dihydrolipoamide dehydrogenase (EC 1.8.1.4) - Trypanosoma cruzi (fragment)
Cjspecies Trypanosoma cruzi
Cjspecies Trypanosoma cruzi
Cjacesion: 813863
Klohrer, H.; Krauth-Siegel, K.L.
Eur. J. Blochem. 194, 863-869, 1997
A,Title: Purification and characterization of lipoamide dehydrogenase from Trypanosoma A,Reference number: 813863; MUID:91099369; PMID:2269305
A,Accession: 813863
A,Residunis Lype: protein
A,Residunis Lype: protein
A,Residunis Lype: protein
Cjsuperfamily: dihydrolipoamide dehydrogenase; dihydrolipoamide dehydrogenase homology Cjsuperfamily: dihydrolipoamide dehydrogenase homology Cjsuperfamily: dihydrolipoamide beta FAD nucleotide-binding fold
